OBJECTIVE

AI/ML enthusiast with hands-on experience building end-to-end machine learning, deep learning, and data analytics applications (predictive systems, interactive dashboards, and full-stack ML tools). Seeking an AI/ML Internship to apply skills in Python, TensorFlow, and data-driven problem solving.

EDUCATION

DAV College, Sector 10

Bachelor of Science in Information Technology (BSc IT) | July 2021 – July 2024

Chandigarh, India

EXPERIENCE

AI/ML Intern — Excellence Technology

Jan 2026 – Present

- Undergoing an intensive hands-on AI/ML training-based internship covering the complete ML/DL workflow, from data preprocessing and model building to deployment.
- Applied learnings to design and build production-style projects, including a personalized fitness recommendation system, a healthcare prediction app, and a data analytics dashboard.
- Gained practical exposure to model building, data visualization, and cloud/free-tier deployment strategies.

PROJECTS

AI-Powered Personalized Workout & Diet Plan Generator

TensorFlow/Keras, Multi-Output ANN, Gradio, Python, Scikit-learn

- Built a multi-output Artificial Neural Network using TensorFlow/Keras to simultaneously predict workout intensity and diet type from user health parameters (age, BMI, activity level, goals), achieving 89-100% validation accuracy across both outputs.
- Engineered a synthetic dataset of 10,000 samples with domain-driven labeling logic (BMI, activity, medical conditions) and applied feature scaling, label encoding, and dropout regularization to prevent overfitting.
- Developed an interactive conversational chatbot interface using Gradio that collects user inputs and delivers personalized workout routines and diet recommendations in real time.
- Integrated BMI classification, Harris-Benedict calorie calculation, and 7-day workout scheduling algorithms to provide a complete, production-style fitness recommendation system.

Smart Healthcare System | AI-Powered Full-Stack Web App

Python, Scikit-learn, FastAPI, Streamlit, SQLite, JWT

- Built a full-stack healthcare application predicting heart disease risk and fitness level using SVM/Random Forest pipelines with OneHotEncoding and StandardScaler preprocessing.
- Designed a FastAPI backend with JWT-based authentication (user & admin roles) and integrated a context-aware AI chatbot delivering personalized health advice.
- Developed an interactive Streamlit dashboard with real-time Matplotlib visualizations and automated PDF report generation (ReportLab) for prediction results.

India Road Accident Data Analysis & Prediction Dashboard

Python, Pandas, Matplotlib, Streamlit

- Performed exploratory data analysis (EDA) on a real-world India road accident dataset in Jupyter Notebook, cleaning and transforming raw data and building prediction-based insights on accident trends.
- Converted the Jupyter Notebook workflow into an interactive Streamlit web application with state-wise, city-wise, and time/road-condition based accident analysis, plus vehicle type and severity insights.
- Built interactive filters and charts for dynamic data exploration, and deployed the complete application live on Streamlit Cloud with the full project published on GitHub.

SKILLS

Languages: Python, SQL

Machine Learning: Scikit-learn, SVM, Random Forest, MLPClassifier, Logistic Regression, Feature Engineering, Model Evaluation

Deep Learning: TensorFlow, Keras, CNN, MobileNetV2, Transfer Learning

Generative AI: LLMs, LangChain, Transformers, Sentence Transformers, RAG, FAISS, Google Gemini API

Backend & Web: FastAPI, JWT Authentication, REST APIs, Streamlit, Gradio

Databases: SQLite, PostgreSQL (Supabase)

Tools & Platforms: Git, GitHub, Google Colab, Hugging Face Spaces, Render, Streamlit Cloud, Postman, Swagger, MS Word, MS Excel, MS PowerPoint
